

## New PowerOne™ Toilet Offers Lowest Water Use On Market

Niagara Conservation, the leading manufacturer of high-efficiency residential conservation products, launched the Niagara PowerOne high-efficiency toilet recently at the International Builders Show. The new toilet uses less water per flush than any other toilet currently available on the market.

The Niagara PowerOne is a 1.0 gallon-per-flush pressure assist toilet with a high-performance flush that is quieter than most pressure-assist toilets. The product features a sweat-free tank and a flush system that is made in the U.S.A.

"Homeowners and commercial builders are seeking better ways to conserve natural resources in the face of higher utility bills and growing concerns about global warming and other environmental issues," Carl Wehmeyer, executive vice president at Niagara, said. "Niagara Conservation is constantly developing new, innovative 'green' products, and we're pleased to now offer a high-efficiency toilet that provides optimal water savings," he said.

The Niagara PowerOne saves approximately 400,000 gallons of water over the life of the toilet, or more than \$1700 in monetary savings. Niagara works with schools, utility com-

panies, multi-housing units and other facilities to provide wholesale prices and incentives.

Niagara also manufactures high-efficiency showerheads, faucet aerators, water and energy conservation kits and other conservation products. The company offers a complete line of energy and weatherization products as well as water and energy conservation programs and services for utilities, government agencies and other companies in need of conservation management.

For more information about Niagara Conservation or its family of conservation products, visit [www.NiagaraConservation.com](http://www.NiagaraConservation.com) (corporate site) or [www.itseasybeinggreen.com](http://www.itseasybeinggreen.com) (retail site) or online or call (800) 831-8383 in the United States or (973) 829-0800 internationally.

With a history of more than 30 years of quality and innovation, Niagara Conservation has earned an unparalleled reputation as the premier manufacturer of high-efficiency water and energy conservation products. Niagara is the leading developer of complete conservation solutions for utility companies, government leaders, energy management officials and environmentally conscious consumers. ♦

## Anvil® International Introduces New Gruvlok® CTS Grooved Copper System

Anvil International has added another alternative solution to its broad range of piping products with the introduction of its Gruvlok CTS Copper System, a grooved copper system that requires only a wrench for assembly on grooved end pipe, eliminating conventional soldering and brazing.

Anvil is a subsidiary of Mueller Water Products, Inc., a leading North American manufacturer and marketer of infrastructure and flow control products for use in water distri-

bution networks and treatment facilities.

The Anvil CTS Copper System allows installers of large diameter copper tubing – for new construction or retrofit jobs – to install faster and easier, with no sweating or brazing required, and it eliminates temperature and weather factors as installation concerns. As a "flame-free" system, CTS eliminates any fire hazard, increasing on-the-job safety.

Gruvlok CTS Copper System fittings mate directly to

copper tube, providing a rigid and durable locked-in connection for tube size ranging from 2" to 8" in diameter, and because there's a union at every joint, fast assembly is assured. CTS fittings, constructed to ASTM B75 UNS C12200 with minimum copper content of 99.9 percent and NSF Approved, are produced with groove and cup ends in a variety of configurations. In addition to elbow, tee and cap fittings the system includes concentric reducers, reducing tees, flange adapters, the Gruvlok 6400 Rigid Coupling and butterfly valves.

The Gruvlok 6400 Rigid Coupling is specifically designed to provide a rigid pipe connection to meet the specific demands of copper tubing installation. It comes with a standard Grade "E" EPDM flush gap gasket (copper color code.)

Anvil has produced a 12-page brochure on its Gruvlok CTS Copper System. To download a copy visit [www.anvilintl.com/](http://www.anvilintl.com/) literature and click on Brochures.

## Dishwasher Installation Simplified Thanks to Another BrassCraft Innovation

BrassCraft's latest little innovation is making life easier for anyone who has dealt with the frustrations of dishwasher installation. Plumbing contractors, homeowners, landlords and facility maintenance staff are all enjoying simplicity and peace of mind the first time they experience installing a SureConnect® Dishwasher Kit.

Anyone who has experienced the frustration of installing a dishwasher will welcome the arrival of the SureConnect® Dishwasher Kit to their toolbox. The days of frustrating rethreading and multiple install steps are over. Perhaps most importantly, installers can walk away from the job with the assurance that the connection is secure. No reinstallation. No call backs.

Design, innovation and the demand for quality materials are what sets the SureConnect® Dishwasher Kit apart from outdated competitors.

Once the dishwasher fitting is installed, no tools are needed for the rest of the installation. Dishwasher installation has never been smoother. Smooth is fast.

The SureConnect's unique lockable housing allows installers to see, feel and hear the connection. They simply push and lock the mechanism with their hands. These three check marks allow the installer to walk away with confidence

and avoid those annoying repeat efforts that must often be done in cramped and poorly lit conditions. The SureConnect® housing features double o-ring protection made from Viton®\* and nitrile that assures a leak-free connection.

The SureConnect Dishwasher Kit is more than a revolutionary outlet. The kit includes the world's most advanced flexible water connector hose. The Speedi Plumb® PLUS dishwasher hose features tough polymer-coated fibers that are tightly braided around a strong PVC inner hose. By marrying with the patented Speedi Plumb® PLUS hose, the SureConnect® outlet joins with a corrosion resistant, highly flexible water connector that has been vetted in wide ranging and demanding applications such as faucets, toilets, washing machines, ice-makers humidifiers, dishwashers and more.

The SureConnect Dishwasher Kit is snapping up the attention of plumbers everywhere.

Derry Yourman, Water Products Manager for BrassCraft Manufacturing: "Our customers want solutions. Innovation in our marketplace is about approaching what seems like a common problem and applying the BrassCraft culture and superior product lines to solve it. The SureConnect® Dishwasher Kit is an example of this."

**Easy:** Once the dishwasher fitting is on, put your tools away. **Quick:** Cut your install time and effort. **Secure:** Push, click and walk away with confidence.

The SureConnect® Dishwasher Kit is another innovation from BrassCraft, another solution for our valued customers across the globe. Also see [www.brasscraft.com](http://www.brasscraft.com).
