ENERGY-SAVING PRODUCTS FROM NIAGARA® CONSERVATION CUT ELECTRICITY, UTILITY BILLS
Surge Protector Stops Phantom Loads, Programmable Thermostat Maximizes Savings

FORT WORTH, Texas – (October 4, 2011) – Niagara Conservation Corporation, a leading manufacturer of water and energy conservation products and services, has designed new energy-saving products that annually save consumers substantial amounts off utility bills.

Continuing its 30-year history as an innovator of residential and commercial high-efficiency water- and energy-saving products, Niagara is introducing two new products that help consumers save money – the Energy Saving Smart Surge Protector and the Eco-IQ™ Programmable 5-2 Thermostat.

Designed to both save money and protect electronic equipment from damaging electrical surges, Niagara's **Energy Saving Smart Surge Protector** protects against spike voltages up to 6,000 volts while saving up to \$84 annually off electricity bills. Thanks to patented auto-switching technology, the surge protector offers four energy-saving outlets that work in sync to efficiently power electronic devices. The surge protector does this by automatically switching devices on and off and using less than one watt of power when fully energized.

Plugging electronic devices into the surge protector's energy-saving outlets eliminates phantom loads, the electricity consumed even when devices are off. The surge protector also includes three always-on outlets and one master outlet for a total of eight outlets.

Providing whole-home comfort and utility savings, the **Eco-IQ 5-2 Programmable Thermostat** can save consumers up to \$180 annually. Programmed using Energy Star® guidelines, the thermostat can help keep a home cool in the summer and warm in the winter for much less than traditional thermostats. The Eco-IQ is easily programmed and offers separate settings for heating and cooling, plus individual modes for weekdays, weekends and a 30-day vacation. The thermostat also features a unique digital lock that can be activated to eliminate unauthorized thermostat resets.

The Eco-IQ 5-2 Programmable Thermostat is easy to install and compatible with most 24-volt gas, oil and electric heating and air conditioning systems, single-stage heat pumps, 2-wire hydronic systems and hydronic air handlers. The Eco-IQ also qualifies for two Leadership in Energy and Environmental Design (LEED) credits from the U.S. Green Building Council.

The Niagara Energy Saving Smart Surge Protector and Eco-IQ 5-2 Programmable Thermostat, in addition to Niagara's wide range of water- and energy-saving products, are available online at www.itseasybeinggreen.com.

ABOUT NIAGARA CONSERVATION

Niagara Conservation Corporation, based in Fort Worth, Texas, is a leading manufacturer of water and energy conservation products and services. The company, founded in 1977 by William Cutler, has revolutionized the utility conservation industry with its [ultra-high efficiency toilets](#) including the revolutionary Stealth® UHET 0.8GPF toilet, [low-flow showerheads](#) and [aerators, lawn and garden](#) products and award-winning EcoKits™. Niagara Conservation truly embodies *It's Easy Being Green*® philosophy believing that by developing and introducing water and energy conservation products, programs and services, the company is contributing to a better quality of life for all. Niagara

NIAGARA
CONSERVATION®

Conservation hosts satellite offices in New Jersey and California. The company also has international offices in Saudi Arabia and Chile and owns a manufacturing facility in China. Niagara serves a global client base throughout North and South America and the Middle East.
